

# Responsive website

JMC 105 | Spring 2017

## ■ 10 points - due start of class March 21

For this assignment, you will create a responsive web page. The page should change as the size of the screen changes.

Feel free to find templates online to use for this or use the example from class, but the content of the site should be about you.

Your site should include:

- One page
- A page title that includes your name
- At least two columns when viewed on desktop screens and one column when viewed on mobile (narrow) screens
- A photo of you and information about you
- A table that is readable on both desktop and mobile (be sure to check it on mobile)
- An H1 that changes size and color based on the size of the screen
- You should use a font from [google.com/fonts](https://www.google.com/fonts) for your headlines
- The site shouldn't look odd (photos covering text) at any screen width

Upload your site to [yourwebsite.com/responsive](https://yourwebsite.com/responsive) and email the link to Chris once it's uploaded.
