

# Site redesign

JMC 105 | Spring 2017

## ■ 25 points - due at the start of class March 7

Redesign a "local-to-you" website using the HTML and CSS skills you have developed this semester. "Local-to-you" means the site can be local to Des Moines or to your home town.

You should design a new homepage (index.html) and one inside page for the site. The inside page should be able to serve as a template for other inside pages.

Turn your site in by uploading it to a folder named "redesign" on your web site (I should find your redesign by going to yourdomain.com/redesign). Email a link to your site a list of five ways you improved the original site to [chris.snider@drake.edu](mailto:chris.snider@drake.edu) with the subject line "Site redesign."

You will be graded based on:

- Your ability to demonstrate skills learned so far in class.
- Coding with clean HTML and CSS (using an external style sheet).
- The overall design, creativity and usability of the site.
- Smart selection of content for the site.
- Uploading the web site to your website.
- Your list of improvements.
